

For Immediate Release

PENTAIR LAUNCHES NEW LINE OF UPSTAGED FOUR INCH SUBMERISBLE PUMPS

Increased staging and new design help set a new standard
in performance and reliability

DEHAVAN, Wisc. (August 19, 2015) - - - Pentair Flow & Filtration Solutions today introduced a new standard in pump performance and reliability with the launch of its upstaged Four Inch Submersible Pumps, providing customers with an average of 20 percent higher performance (when compared to competitor's published performance curve data).

The power of the Pentek XE Series motor was the key to allowing Pentair engineers to add additional stages and achieve increased performance. Increased staging across many of Pentair's 1/2 and 1-1/2HP pumps means that customers can now enjoy greater performance, with heads to 800 feet and flows up to 27 gallons.

In addition, advancements in Pentair's JP Series Four Inch Submersible Pump technology and design, including a stronger discharge and added spring-loaded check valve, now provide customers with a higher quality pump.

"Pentair's new upstaged Four Inch Submersible Pumps provide customers with more performance for their money," said Taylor Crenshaw, product manager, Pentair Flow & Filtration Solutions – Water Solutions. "With the new upstaged Four Inch Submersible Pumps, customers get the benefit of covering more applications with the same product, at the same horsepower as before."
