

## SAY GOODBYE TO LOW WATER PRESSURE.

If you can't count on strong water pressure from your well system, it's a frustrating daily experience.

For example...

**Your showers go from "peak to weak"**

**Your dishwasher can't get dishes clean**

**Your sprinklers can't cover your entire lawn, so you get "dead spots"**

### Homeowners love PENTEK INTELLIDRIVE™.

"What a difference! Before, we couldn't take a shower if the sprinkler or dishwasher were running. Now, we can do everything at the same time, and the water pressure's always great!"

"Our dishwasher wasn't getting dishes clean enough, and I thought we needed a new one. But the real problem was low water pressure, and since we added PENTEK INTELLIDRIVE to our system, our dishes come out sparkling clean."

Inadequate pressure happens when the home's demand fluctuates.

For instance, if you're taking a shower, water pressure drops when someone starts the dishwasher or turns on a faucet.

Sudden demand from just one fixture or appliance produces a pressure drop in every other fixture or appliance in the house.

**There is a solution.
